## Method of Identifying Changed Product

### Details:

Any Jetson Orin NX 8GB/ Jetson Orin Nano 8GB/ Jetson Orin Nano 4GB with 699 level part number version greater than or equal to 301 may be affected by this PCN. Each module has a label and/or 2D barcode which provides the 699 level part number.

For example, a module with 699 level part number 699-13767-0001-301, 699-13767-0003-301, or 699-13767-0004-301 may be affected.

Customers may receive mixed shipments, with 699 level part number versions less than, equal to, or greater than 301. Modules with 699 level part number versions equal to or greater than 301 may be built with the new components described in this PCN, or with the older components.

## Recommended Action for Partners/Customers

To support the new Samsung DRAM, the software image flashed to the Jetson Orin NX 8GB, Jetson Orin Nano 8GB or Jetson Orin Nano 4GB must include:

- Appropriate BCT and DVFS changes required by the Samsung memory device

Jetpack 5.1.3 / BSP 35.5 or Jetpack 6.0 / BSP 36.1 or later releases of Linux for Tegra (L4T) will include the required change.

For customers using older versions of JetPack who are not able to update to the above version or later, please contact your NVIDIA support representative to discuss possibilities for patching.

Note that the new firmware is also fully compatible with the previous manufacturing BOM.

In addition to integrating the required software changes, customer should perform whatever additional qualification they deem required to validate the change.
